PLATFORM RESEARCH, STRATEGY, EXPERIENCE AND BUILD PLAN

# A premium experience for buying and exporting vehicles from anywhere.

Public website · Journey Tracker · Administrator portal · CEO portal

27 October 2026

Screens use stand-in 3D vehicles and mock data

CONTENTS

# What is in this plan

**Part A · Research and foundations**
1 Executive summary · 2 Marketplaces and auctions · 3 Export, compliance and shipping · 4 Payments · 5 Lessons for Raptors

**Part B · The product and the experience**
6 Brand and design direction · 7 Customer journeys · 8 Sitemap · 9 The public website · 10 Request a Vehicle · 11 Quotation, invoice, payments and receipts · 12 Export and shipping · 13 The Journey Tracker · 14 Emails, documents and conveniences · **The screens: Figures 1–20**

**Part C · The two portals**
15 Administrator portal · 16 CEO portal · 17 Roles and permissions

**Part D · The build plan**
18 Data design · 19 Technology and security · 20 Milestones · 21 First release vs later · 22 Decisions and risks · 23 Sources · 24 Review checklist

**How to read this plan.** Statements are tagged VERIFIED (confirmed on a current official page), REPORTED (third-party, to confirm), PRACTICE (industry practice, not confirmed live) and DECISION (a choice Raptors must make). The screens in Figures 1–20 are concept designs: vehicles are 3D stand-ins, and all names, prices and figures are mock data. Every section is numbered; reply with the section or figure number and what to change.

# 01 Executive summary

**What we are building.** One platform with three experiences:

1. **Public website and Journey Tracker.** Buyers worldwide discover vehicles, request any vehicle, receive quotations, and follow their vehicle to their port.
2. **Administrator portal.** Keeps the platform and its records in order: vehicle records and listing preparation, shipment records and tracking updates, staff accounts (created only when the CEO authorises), website structure, and the technical side. The Administrator prepares and maintains; the CEO approves.
3. **CEO portal.** Runs and decides the business: customers, enquiries, quotations, requests, payments, margins, a dashboard of charts, and the approvals that control every consequential action.

**Two ways Raptors sells**

| MODEL | WHAT THE CUSTOMER SEES | WHAT RAPTORS DOES |
|---|---|---|
| **Own stock** | A finished listing with Raptors' own photography, exact USD price and condition | Owns the car, prepares it, sells it, ships it |
| **Vehicles sourced on request** | A *request*: the customer chooses any vehicle. They never see the source or the price until a branded quotation arrives | Searches dealer-only platforms (Manheim, OpenLane and others) and other sources with its dealer licence, finds the car, quotes, buys and ships it |

Raptors already does all of this today. The platform digitalises it, so every request is captured and followed, the customer can see where their vehicle is without calling, and every quotation, invoice and receipt is branded and consistent.

**What changed in this version (all agreed with the client)**

- **Request a Vehicle replaces public auction bidding.** Customers no longer paste auction links. Raptors searches privately; no auction accounts, lots or wholesale prices are ever shown. Open platforms such as Copart are no longer a focus (customers see their prices, so margins are thin).
- **Premium, photography-led UI** in the Raptors logo palette, following the two reference designs.
- **Quotation and invoice flow:** the CEO prepares a quotation, previews it and explicitly sends it; the customer accepts by email or direct communication; the CEO records acceptance and sends a branded invoice privately.
- **Payments by international bank transfer only,** with deposits and balances, confirmed by Raptors in its own bank, and a branded receipt for each confirmed payment. No online card payments at launch.
- **Administrator and CEO roles** as set out in Section 17.

**What international buyers worry about.** Not whether the site is pretty, but whether the dealer is real, whether the price is honest, and what happens after they pay. The site answers all three on every page.

**What we need from you next.** Section 22 lists the decisions, asked one at a time.

# 02 Research: marketplaces and auctions

**Tags used throughout:** VERIFIED confirmed on a current official page in this research; REPORTED found on third-party sites and to be confirmed; PRACTICE standard industry practice from general knowledge; DECISION a choice Raptors must make.

**Focus.** Raptors' value lies on the **dealer-only** platforms, Manheim and OpenLane, which customers cannot search themselves. Open platforms (Copart, IAA) show prices publicly and are background only.

### 2.1 Manheim and OpenLane (dealer-only)

- VERIFIED Manheim sign-up requires an Auction Access ID, which authenticates the buyer as an authorised dealer; Manheim supports proxy bidding.
- REPORTED Manheim press releases from 2009–2010 describe an export arm; we could not confirm it operates in that form today. VERIFIED Manheim's January 2025 export platform is EU-focused.
- VERIFIED OpenLane Inc. is the former KAR Global. Its US marketplace combines off-lease and dealer inventory, with a 24/7 marketplace, Buy It Now and timed auctions. The buyer fee depends on the purchase price and includes title transfer and escrow. For late-title sales, OpenLane's terms set a 45-day window.
- REPORTED OpenLane US is for wholesale dealers; sign-up is online; typical in-state transport takes about 5–7 business days.

**Lesson:** a customer cannot see or search these platforms. Raptors buys with its own dealer access and resells at its own price, so the customer sees one clear quotation. The site names the platforms Raptors is registered with, so visitors know the access is real. Raptors' own procedure is configured with Raptors at Milestone 9.

### 2.2 Open platforms (background)

- VERIFIED Copart lists more than 125,000 vehicles a day and lets international buyers join; memberships involve a deposit of 10% of the maximum bid above a basic buying power; wires are most reliable for international buyers and are accepted only from the account holder; every listing has a shipping estimator. Fee amounts differ between Copart pages and must be re-checked before being quoted.
- REPORTED IAA is fully digital; foreign buyers get four business days to pay; fee tiers rise with the bid and vary by branch.

**Lesson:** these have hard payment clocks and stacked fees, which Raptors already works within. They are not part of the website.

### 2.3 Retail benchmarks

- VERIFIED Carvana's listings include a 360° view, a free history report, the window sticker and a seven-day return promise. REPORTED Reviews show friction when promises on the page are not kept.
- PRACTICE Bring a Trailer wins on editorial galleries; AutoTrader and Cars.com on fast filtering. These were not verified on live pages.

**Lesson:** present proof generously, but never show a date, guarantee or status that Raptors cannot back up.

## 03 Research: export, compliance and shipping

- VERIFIED For every used self-propelled vehicle leaving the US, Electronic Export Information must be filed in the Automated Export System, and the resulting transaction number must reach the carrier at least **72 hours** before export. The original title (and copies) must reach customs at the port at least 72 hours before export; a lien needs a written release.
- PRACTICE Most dealers delegate this to a licensed freight forwarder. The platform does not file anything; it records status and holds documents.
- REPORTED RoRo ships are usually cheaper and sail from certain ports; containers reach more destinations, protect the car and can carry non-running vehicles; shared containers may wait to fill.

- REPORTED Destination rules conflict between sources. For Nigeria, sources disagree on the maximum vehicle age (10, 12 or 15 years) and describe different duty rates.

**Central rule:** the site never states a country's age limit, duty or document list as fact. A **destination record**, maintained by staff and dated, holds what was last confirmed; every statement says "as last confirmed on [date]". If no valid rate exists the site says "We will confirm". The platform never calculates import duty.

# 04 Research: payments

- VERIFIED For a US account, international customers can send SWIFT wires in **USD only**; intermediary banks' fees can reduce the amount received; international transfers can take longer, and a sent wire cannot simply be reversed; a refund is a new outgoing wire.
- PRACTICE Customers should be asked to cover all bank charges, and Raptors should confirm receipt in its own bank statement before treating funds as received.
- **Decision:** online card payments are **not used at launch** because their fees are high on large international amounts. Payment is by international bank transfer to Raptors' US business account. Cards can be reconsidered later.

Section 11 gives the full flow, including deposits and balances.

# 05 Lessons for Raptors

1. **Show the money honestly:** vehicle, fees, shipping estimate, and what the customer pays in their own country, as separate lines.
2. **Prove you are real:** licence number, address, registration, named contact, and the platforms Raptors is genuinely registered with.
3. **Do not force a checkout.** The action is "Request a vehicle" or "Get a quote", followed by a conversation.
4. **Two flows, two sets of statuses:** own stock, and vehicles sourced on request. For sourced vehicles, the price and source stay with Raptors until the quotation.
5. **Every destination is confirmed by a person** before a customer is quoted for it.
6. **Fit the platform to Raptors' way of working;** do not invent procedures.
7. **Photography is the product.**
8. **Never show empty features:** no 360° frames means no 360° tab.
9. **Record status, not paperwork:** licensed forwarders file; the platform tracks.
10. **Make the next step obvious** on every page.
11. **Money logic lives in the database,** never in a template; payment records and issued documents are never edited.
12. **Plan for fraud on both sides:** fake buyers, overpayment scams, a claimed payment that never cleared, impersonation of Raptors.
13. **Promotion must be accurate:** no fake testimonials, no misleading auction claims.

# 06 Brand and design direction

The aim is a **premium, distinctive** marketing experience, clearly not a copy of Manheim, Cars.com or any template. It follows the two reference designs supplied by the client: a calm light canvas, large cut-out vehicles, soft rounded cards, numbered steps and pill buttons. See **Figure 1** and the screens in Figures 2–20.

| COLOUR | HEX | USED FOR |
|---|---|---|
| Crisp Pure White | `#FFFFFF` | Page and card surfaces |
| Platinum Light Gray | `#E9EAEC` | Secondary backgrounds and dividers |
| Crimson Red | `#C62838` | Brand emphasis and selected actions; used sparingly |
| Metallic Slate | `#68717B` | Secondary text and labels |
| Dark Charcoal | `#24272B` | Headings, primary text, strong contrast |
| Metallic Silver Gray | `#B7BCC2` | Borders and fine details (too light for text) |

White on crimson reaches 5.6:1 and slate on white 5.0:1, both passing the 4.5:1 target for text; slate on platinum (4.1:1) is for larger or non-essential text only.

- **Type: Plus Jakarta Sans** for headlines and interface, **Inter** for body text and data, **JetBrains Mono** for VINs and IDs. One system across website, portals, emails and documents.
- **Components:** pill buttons with an arrow circle (charcoal for most actions, crimson for the key action), white rounded cards, numbered steps (01), quiet chips, thin silver borders.
- **Photography first:** large cut-out vehicles on soft platinum, consistent angles, flaws photographed and labelled. Concept screens use 3D stand-in vehicles; Raptors' real photography replaces them when the system is live.
- **Light mode only at launch.** No AI chat: a **concierge** panel offers quick actions (request a vehicle, track your vehicle, WhatsApp, guides).
- **One product:** the CEO and Administrator portals use the same colours, type and components in a denser working layout.
- **Logo:** the supplied logo is the master. The version in these designs is a cleaned interim vector; the final file replaces it, with light and dark variants.
- **Accessibility:** WCAG 2.2 AA contrast, keyboard use, visible focus, text alternatives for photos, respect for reduced-motion settings.
- **To avoid:** gradient banners, countdown timers, fake scarcity, fake testimonials, misleading auction claims, stock handshakes, generic icon sets, auto-playing carousels, and a pop-up chat bubble before the visitor has done anything.

# 07 Customer journeys

## Journey A: own stock

1. **Lands** on the homepage and sees featured and new vehicles.
2. **Browses** inventory, filters with pills, saves favourites.
3. **Opens** a vehicle page: gallery, specifications, documents, exact USD price.

4. **Chooses a destination** and sees one of three honest states: *Estimate available*, *We will confirm*, *Not currently exported there*.
5. **Requests a quote** (short form or WhatsApp). No account.
6. **Receives a quotation** by email, sent deliberately by the CEO.
7. **Accepts by email or direct communication.** The CEO records it and sends a branded invoice privately.
8. **Pays by international bank transfer,** in full or as a deposit and then the balance. Raptors confirms in its own bank; a receipt follows each confirmed payment.
9. **Receives a Buyer ID** and follows the vehicle on the Journey Tracker.
10. **Receives documents** for clearance at the destination.

### Journey B: a vehicle Raptors sources

1. Visits **Request a Vehicle** and completes four steps: make, car details, destination and budget, how to reach them.
2. Follows the search on a request page; receives an email at each stage.
3. Raptors searches the dealer-only platforms and other sources behind the scenes.
4. When found, the customer receives photos and specifications, then a branded quotation with Raptors' all-in price.
5. Acceptance, invoice, payment, receipts and the Journey Tracker follow as in Journey A.

### Journey C: US local buyer

Vehicle page, enquiry or call, appointment or reservation deposit, pickup or domestic delivery.

### Journey D: a buyer who needs more information

"I'm not ready, send me details": a simple form that leaves a lead and triggers an explanatory email. No pressure, no countdowns.

## 08 Sitemap and navigation

**PUBLIC WEBSITE**
No login

- Home
- Inventory (filters, vehicle pages)
- Request a Vehicle (four steps, request page)
- Export & Shipping (how it works, destinations, total cost, documents, RoRo vs container)
- About (story, licence, team, delivered vehicles)
- Guides · FAQs · Contact
- Legal (terms, privacy, payment and refund policy, cookies)

**ADMINISTRATOR PORTAL**
Records, shipments, accounts, technical

- Today
- Vehicle records
- Photos, video and documents
- Shipment records and tracking
- Staff accounts (on CEO authorisation)
- Roles and permissions
- Approved corrections
- Website structure and SEO · media library
- Integrations and settings

**CEO PORTAL**
Business, money, approvals, charts

- Dashboard (9 pages, 12 charts)
- Approvals
- Enquiries and quotations
- Vehicle requests
- Customers
- Orders and payments (invoices, receipts)
- Finance
- Vehicles and shipments
- Destinations, rates, fees

| | | |
|---|---|---|
| Journey Tracker (private: VIN + Buyer ID) | Security · data tools · backups · monitoring · audit log | Website content · staff and roles · reports · policies |

**Public menu:** Home · Inventory · Request a Vehicle · Export & Shipping · About · Contact, with **Track your vehicle** and WhatsApp always visible.

**Public pages:** Home; Inventory (filters, vehicle pages); Request a Vehicle (four steps, request page); Export & Shipping (how it works, destinations, understanding your total cost, documents, RoRo vs container); About (story, licence, team, delivered vehicles with permission); Guides; FAQs; Contact; Legal (terms, privacy, payment and refund policy, cookies); Journey Tracker (private).

# 09 The public website

Screens: **Figures 2–4** (homepage), **Figure 5** (inventory), **Figures 6–7** (vehicle page), **Figure 15** (concierge, favourites, guides, trust, WhatsApp).

## 9.1 Homepage

The homepage is the face of Raptors: within ten seconds a visitor should know what Raptors does, that it is real, and what to do next.

| # | SECTION | PURPOSE |
|---|---|---|
| 1 | Header | Logo, pill menu, **Track your vehicle**, WhatsApp |
| 2 | Hero | A large cut-out vehicle, *Premium vehicles, found and delivered worldwide*, **Request a vehicle** and **Browse inventory** |
| 3 | Three steps and dealer access | Explain the service; state that Raptors is a registered dealer at Manheim, OpenLane and other platforms |
| 4 | New arrivals | Soft cards with exact USD prices |
| 5 | Dealer-only access band | Names the platforms Raptors is registered with and explains the benefit |
| 6 | How it works | Three numbered cards |
| 7 | Recently sold | Sold vehicles, shown **without prices** |
| 8 | Recent acquisitions | Vehicles just added to stock |
| 9 | Approved customer deliveries | Shown only with the customer's permission, no personal details |
| 10 | Guides for buyers | Dated, honest articles for trust and search |
| 11 | Trust information | Licence, base, years, countries shipped to; **only real, recorded figures** |
| 12 | Request a vehicle | A final call to action |
| 13 | Footer | Menu, legal, contact |
| Floating | WhatsApp, concierge, favourites | A WhatsApp button; quick actions; saved vehicles on the device, optionally emailed |

**Search visibility:** clean addresses, structured data on vehicle pages, fast images on phones, guides by country and topic, sharing cards.

## 9.2 Inventory

Photography first. Filters are rounded pills (make, model, year, price, body type, title status, location, export-ready), with one search for make, model or VIN, sorting, 24 vehicles per page with "Load more", shareable addresses and favourites saved on the device. **Title status** matters for export. Reserved vehicles stay visible with a clear label. A filter change should respond in under half a second.

## 9.3 Vehicle page

Centred title and quiet facts, a large hero with 360°, video and full screen, a gallery strip with flaws labelled, an overview, specifications, features, documents, a **destination estimator** (country and port give a dated estimate or "We will confirm"), the exact USD price and **Get a quote**.

**Sections appear only when real data exists.**

| SECTION | APPEARS ONLY WHEN |
|---|---|
| 360° view | At least 24 frames are uploaded |
| Video | A video exists |
| History report | A report is attached (provider and date shown) |
| Condition report | The inspection checklist is completed |
| Estimate | A valid, unexpired rate exists for that port and method |
| Export-ready badge | Documents are verified |

**Media:** photos are resized automatically in modern formats; 360° is a 24–36 frame sequence that loads on scroll; video streams from a host; title images and identity documents are private by default.

**How an enquiry reaches the CEO:** the form creates an enquiry linked to the vehicle and customer; the assigned person is emailed; the customer receives a confirmation with a reference; it appears at the top of the CEO portal's Enquiries with a response timer.

# 10 Request a Vehicle

Screens: **Figures 8–10**. For any vehicle from any manufacturer. The customer chooses the car; **everything else rests with Raptors.**

## 10.1 The four-step request

1. **Which make?** Large tiles for every manufacturer, plus Other.
2. **Tell us about the car:** model, new or pre-owned, year range, steering side, colour and options, with quick choices.
3. **Where is it going?** Country and port; the shipping estimate appears as soon as a port is chosen.
4. **How do we reach you?** Name, email, WhatsApp and a preferred way to be contacted. This is how Raptors reaches the customer while it searches.

## 10.2 After the request

The customer receives a request number and a page that follows the search in the style of the Journey Tracker:

**Received → Searching → Vehicle found → Quotation → Accepted → Payment → Purchased → Shipping**

1. **Searching.** Raptors searches dealer-only platforms and its other sources. The customer sees only that the search is under way.

2. **Vehicle found.** The customer receives photos and specifications, without the source or any auction price CONFIRM .
3. **Quotation, acceptance, invoice, payment, receipts** follow as in Section 11.
4. **Purchased,** and the vehicle moves into the customer's Journey Tracker.

### 10.3 Price privacy (non-negotiable)

In the request flow, the source platform, listing, lot, auction price, platform fees and Raptors' margin are visible to the **CEO only**. They never appear on any customer-facing page, email, document or API response. The platform stores **no auction passwords**; buying happens in each platform with Raptors' own login.

### 10.4 Where a found vehicle lives

When Raptors finds the vehicle, it is brought into Raptors' inventory and **flagged as sourced for that customer**. It is not listed publicly unless the CEO chooses. The customer is notified by email ("Vehicle found").

### 10.5 The CEO's requests board

Auction-platform requests and vehicle requests land on one board (**Figure 16**): New, Searching, Found, Quotation sent, Accepted, Paid, Purchased. A **find-and-quote builder** holds the vehicle found, a private source note, internal costs (CEO only) and the margin, and builds the quotation the customer will see. DECISION Pricing model: the fee shown as a line in the quotation, a refundable search deposit, or both.

**Procedure details defined with Raptors:** how Raptors searches, who decides, how deposits work with each platform, and what a quotation includes are Raptors' decisions, agreed at Milestone 9.

## 11 Quotation, invoice, payments and receipts

Screens: **Figure 11** (documents), **Figure 17** (recording a payment).

### 11.1 The agreed flow

1. The customer sends an enquiry or a vehicle request.
2. The CEO reviews it and prepares a quotation.
3. **The CEO previews the quotation and explicitly sends it.** *Saving never sends.*
4. The customer accepts by email or direct communication. There is no accept button on the website.
5. The CEO records the acceptance and prepares the branded invoice.
6. The invoice is sent privately to the customer.

### 11.2 What a quotation contains

| LINE | NOTES |
|---|---|
| Vehicle price | From the vehicle record |
| Raptors' fees | Each named |
| Inland transport to port | If applicable |
| Export preparation and documents | Raptors' fee |

| LINE | NOTES |
|---|---|
| Ocean freight (estimate) | From the destination rate range, with a validity date |
| Marine insurance (optional) | Included or declined |
| **Payable to Raptors** | The only total Raptors collects |
| **Charges in your country** | Duty, taxes, port fees, clearing agent: shown as *estimated, paid locally*, never added into the total |
| Valid until | An expired quotation cannot become an invoice |
| Not included | Plain list |

## 11.3 Deposit and balance

The customer pays in full, or a deposit and then the balance, per the agreement. **The CEO records each payment** as *deposit*, *part payment* or *balance*, with the amount, the date it reached the bank and the bank reference.

*Example:* the order is $10,000; the customer pays a $2,000 deposit; the CEO records it; the system shows **$2,000 of $10,000, balance $8,000**, and the order is **Part paid**. When the balance arrives and is recorded, the order is **Paid in full**.

## 11.4 Raptors confirms; the platform records

- The CEO (or authorised Finance staff) **confirms in Raptors' own bank that funds have cleared** before recording a payment; the form requires this to be ticked.
- **An invoice is never marked paid** because of a screenshot, message or claim.
- A shortfall (bank charges) is shown.
- Every confirmed payment produces a **branded receipt** showing paid to date and balance; the last is marked *Paid in full*.
- Payment records and issued documents are never edited or deleted; corrections are new, linked records.

## 11.5 When the next steps begin

Payment-dependent steps (buying the vehicle, booking shipping, releasing documents) **begin when payment is complete**. The CEO can start a step early only by recording a reason, which is logged. DECISION Raptors confirms which steps wait for the deposit and which for full payment.

## 11.6 Lifecycles

| RECORD | STATUSES |
|---|---|
| **Enquiry** | New → Contacted → Quoted → Negotiating → Won / Lost / Spam |
| **Quotation** | Draft → Previewed → Sent → Accepted (recorded by the CEO) / Declined / Expired / Superseded |
| **Order** | Awaiting payment → Part paid → Paid in full → Preparing documents → Export in progress → Shipped → Arrived → Closed (or Cancelled) |
| **Vehicle** | Draft → Submitted → Approved → Available → Reserved → Sold (or Withdrawn) |
| **Vehicle request** | Received → Searching → Vehicle found → Quotation → Accepted → Payment → Purchased → Shipping |

A vehicle is **Reserved** when a deposit is confirmed (one active reservation per vehicle, with a release date; overrides logged) and **Sold** only when paid in full.

### 11.7 Currencies and fraud controls

Display currency: USD (an optional indicative conversion, clearly labelled). Charge currency: USD only. Settlement: USD to Raptors' US account. The sender's name must match the customer; third-party payments need the CEO's approval; overpayments are refunded only to the originating account; no release of a vehicle or title until payment is complete; restricted-party screening of customers and consignees PRACTICE .

## 12 Export and shipping workflow

**Destination records** (one per country and port): status (Open, Confirm each time, Not served); rules "as last confirmed" with date and person; documents buyers need; methods and preferred forwarder; transit range; rate ranges with validity. The CEO decides which countries are open; the Administrator maintains the list.

**Per-order export checklist** (kept by the Administrator, visible to the CEO): funds cleared, buyer and consignee confirmed, screening, title in hand, lien released, forwarder booked, export filing and transaction number recorded by the forwarder, **72-hour deadline** calculated from the vessel cut-off, delivered to port, bill of lading, vessel, shipped, documents sent, arrived, released.

**Exceptions** (missed cut-off, title delay, shortfall, port congestion, stale shipment) are flagged and shown on the CEO's dashboard.

## 13 The Journey Tracker

Screens: **Figures 12–13** (buyer), **Figure 20** (Administrator's update screen).

After payment is complete, the buyer receives a **Buyer ID** and follows the vehicle without ever calling the company.

### 13.1 How it works

1. **Payment is complete.** The system creates the Buyer ID automatically DECISION (the client may prefer it at deposit); only a hash is stored.
2. The Buyer ID is sent with the order confirmation.
3. The buyer signs in with the **VIN and the Buyer ID**. The VIN is on the car, so the long random ID is the real key: wrong attempts pause the page and alert the CEO, errors never say which field was wrong, the page is read-only and shows only that buyer's vehicle, and a lost ID is reissued by the CEO.
4. The buyer sees the vehicle's journey, documents and payment status.
5. **The Administrator keeps it current.** Vehicles carry no tracker, so the Administrator follows each shipment with the forwarder and carrier and publishes updates (stage, place, photos, documents, delays). Each update appears immediately.

### 13.2 What the buyer sees

A dotted world map with the route, the vehicle's current position and the time of the last update; a countdown and arrival range; eight stages with dates (Paid, Documents, At port, Loaded, Sailed, At sea, Arrived, Released); a delay notice; a feed of updates with photos; documents with one-tap download; shipping details; payment summary; a customs-clearance checklist; a named contact; an optional limited link for a clearing agent; email notifications. A phone layout is designed first.

### 13.3 Reporting a delay

The Administrator chooses the stage affected and a reason (port congestion, vessel rescheduled, customs hold, weather, documents pending, transshipment delay, strike, other), enters the new arrival range, adds a short note and optionally a photo, previews what the buyer will see, and publishes. The buyer sees an amber notice; the CEO is notified; the delay appears on the dashboard. A shipment with no update for three days is flagged on the Administrator's list.

Optional later: real vessel positions from a data provider.

# 14 Emails, documents and conveniences

Screens: **Figure 14** (emails), **Figure 11** (documents), **Figure 15** (concierge and more).

Every message and document comes from a branded template; the CEO approves the wording and the platform sends it at the right moment.

- **Principles:** one design system; one job per message; mobile first with a plain-text version; replies go to a named person; always a link back; the vehicle-request flow never shows source or price.
- **Library:** enquiry received; quotation ready and reminder; request received; we are searching; **vehicle found**; invoice; **deposit or payment received with receipt**; purchased; **order confirmed with Journey Tracker access**; documents ready; at the port, loaded, sailed; **delay notice**; arrived; delivered; inside Raptors alerts (new enquiry, approval needed, shipment needs an update).
- **Documents:** the quotation, the invoice (with a deposit and balance schedule) and the receipt are numbered, linked and never edited. Numbering, tax lines, bank details and terms are settled with Raptors' accountant DECISION .
- **Conveniences:** concierge quick actions, favourites saved on the device and emailed on request, a guides hub, a trust list, a pre-filled WhatsApp message from a vehicle page.

THE SCREENS

# Figures 1 to 20: the approved design

These are the client-approved screens, in the new Raptors design language. They are concept designs with mock data and stand-in vehicles. The sections of the plan refer to them by number.

| FIGURE | SCREEN | SECTION |
|---|---|---|
| **1** | Brand foundation: logo, palette, type, components | 6 |
| **2** | Homepage: hero | 9 |

### WHY TRUST RAPTORS

- Registered US dealer, licence number shown
- Registered dealer at Manheim, OpenLane and other platforms
- Itemised quotation before you pay anything
- Every payment confirmed and receipted
- Follow your vehicle on the Journey Tracker

Hello, I am interested in the 2013 Ferrari 458 Spider (RA-0412). Can you send me a quotation to Tema?

Chat with us **WA**

### SEARCH AND SEO

Clean, readable addresses
Vehicle pages with structured data
Guides by country and topic
Fast images on phones
Social sharing cards

1 **Concierge.** Quick actions instead of an AI chat: request, track, WhatsApp, guides.

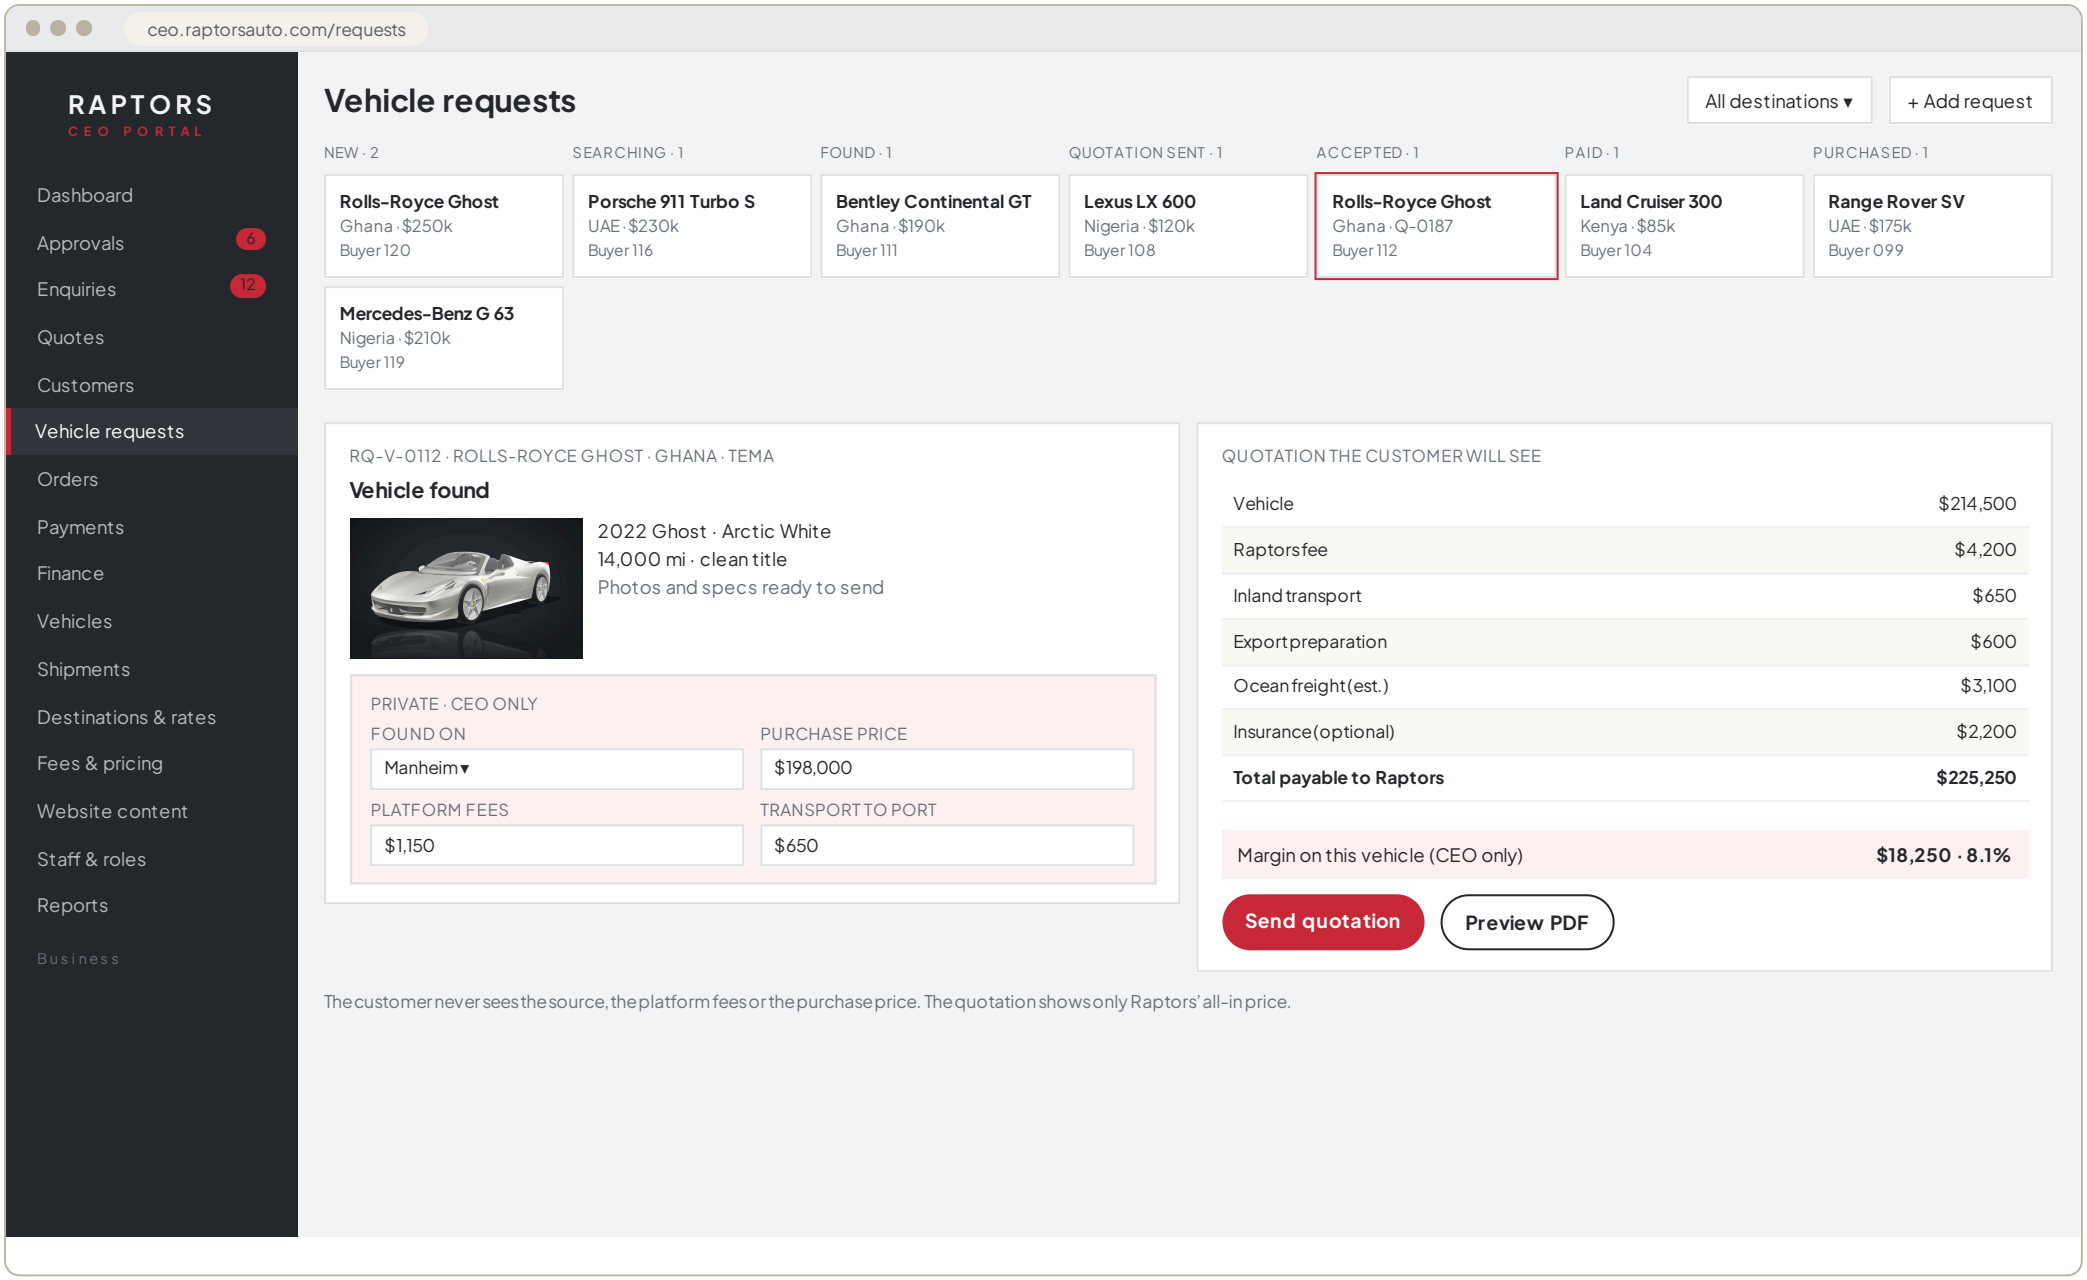

2 **Favourites.** Saved on the device; the customer can email the list to themselves.

3 **Guides and SEO.** Helpful, dated, honest articles.

4 **Trust and WhatsApp.** A clear trust list and a pre-filled WhatsApp message from a vehicle page.

FIGURE 16 **CEO portal: requests board with find-and-quote builder**

CONCEPT MOCKUP · MOCK DATA · STAND-IN 3D VEHICLE

1 **Board.** Seven stages from New to Purchased, each card showing make, destination and budget.

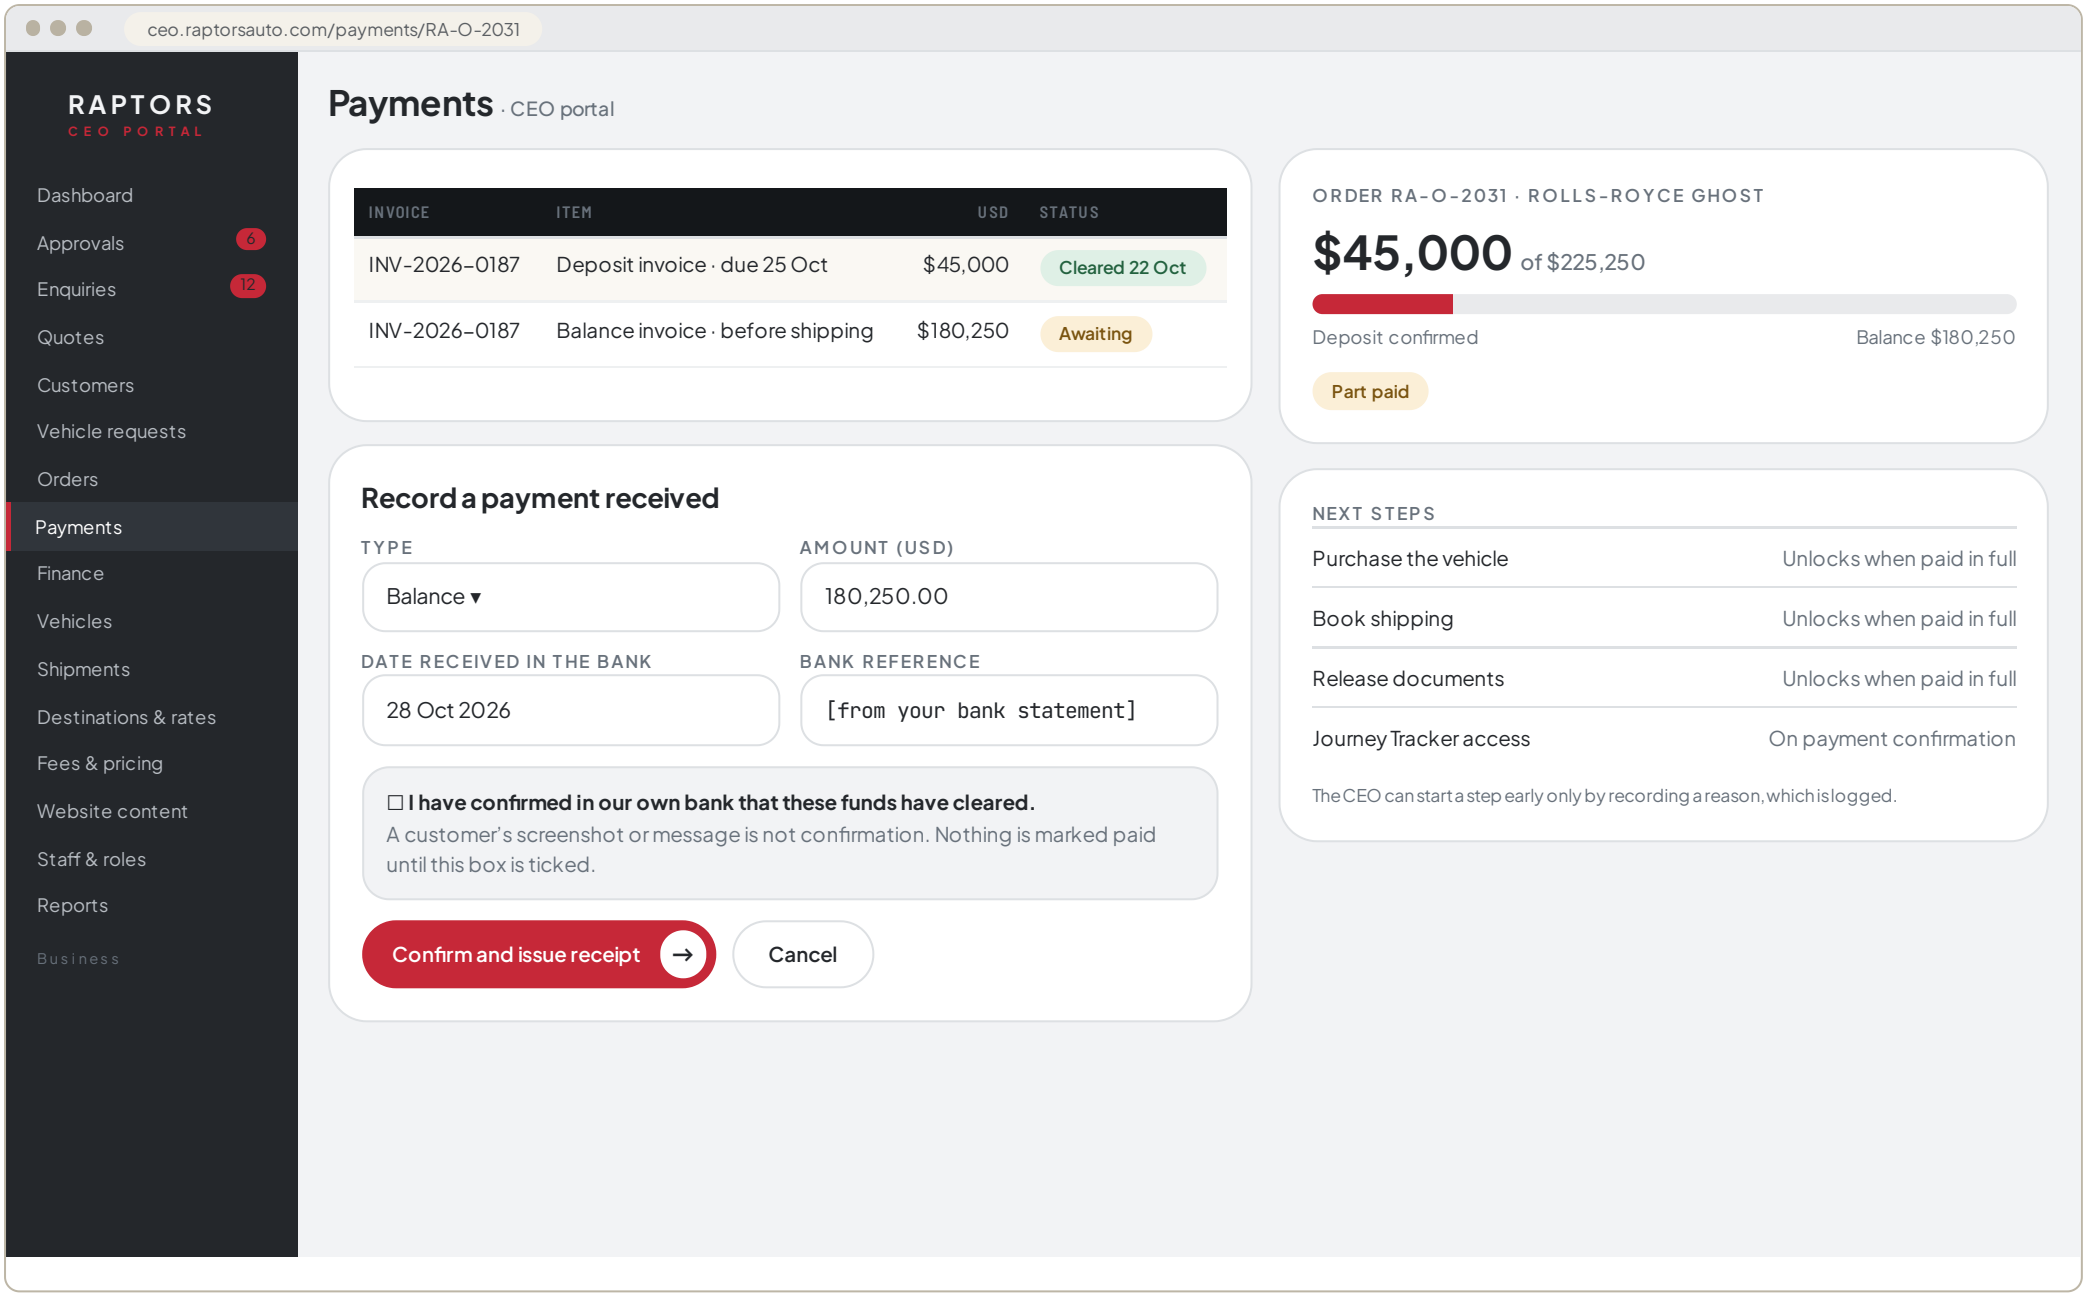

2 **Private panel.** Where the car was found, what Raptors pays and the margin: CEO only.

3 **Quotation.** Built from lines the customer will see; the all-in price only.

4 **Price privacy.** Source, platform and purchase price never reach the customer.

FIGURE 17 **CEO portal: recording a payment, with deposits and balance**

CONCEPT DESIGN · MOCK DATA

1 **Deposit and balance.** Each payment is recorded against the invoice, as deposit, part payment or balance.

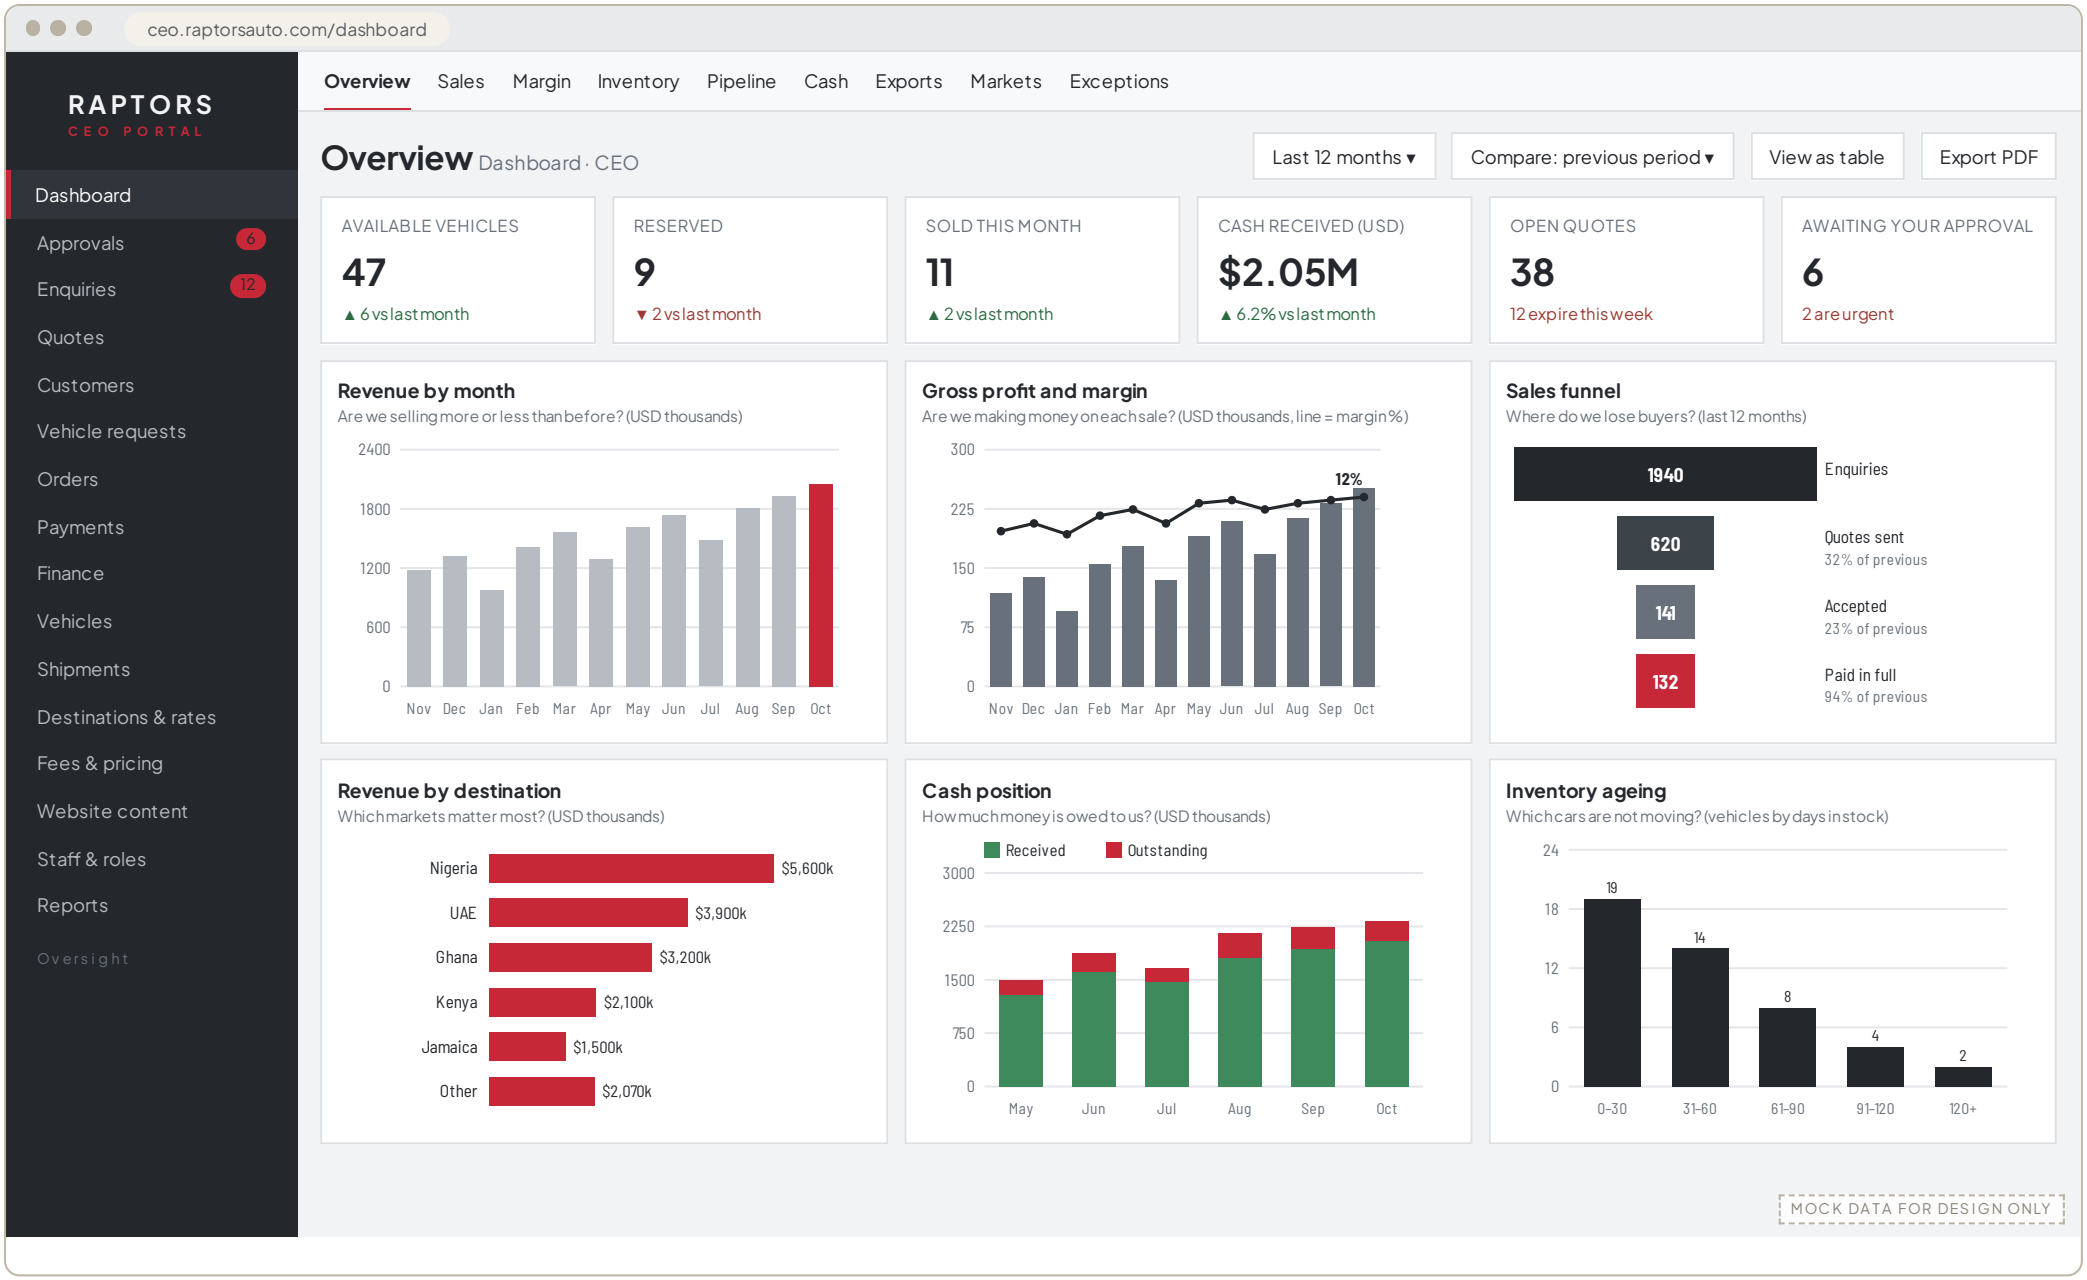

2 **Raptors confirms.** The CEO ticks that the funds have cleared in the bank; a screenshot is never enough.

3 **Receipt.** Confirming issues a branded receipt showing what is paid and what remains.

4 **Gated steps.** The next steps unlock when payment is complete, unless the CEO records a reason.

FIGURE 18 **CEO dashboard: Overview**

CONCEPT MOCKUP · MOCK DATA

1 **Headline tiles.** Single numbers with movement against the previous period, including what awaits the CEO's approval.

2 **Charts.** Each answers one question; click any bar, point or slice to open the records behind it.

3 **Controls.** Date range, comparison period, View as table and PDF export on every chart.

4 **Honest data.** Figures come only from recorded orders, payments and costs. Mock data shown here is for design only.

History report public · Inspection public · Title copy internal

Draft → Submitted → **Approved by CEO** → Live

**Preview public page** | **Submit for CEO approval**

1 **Record list.** Search and filter; media completeness is visible at a glance. Status is maintained, not decided.

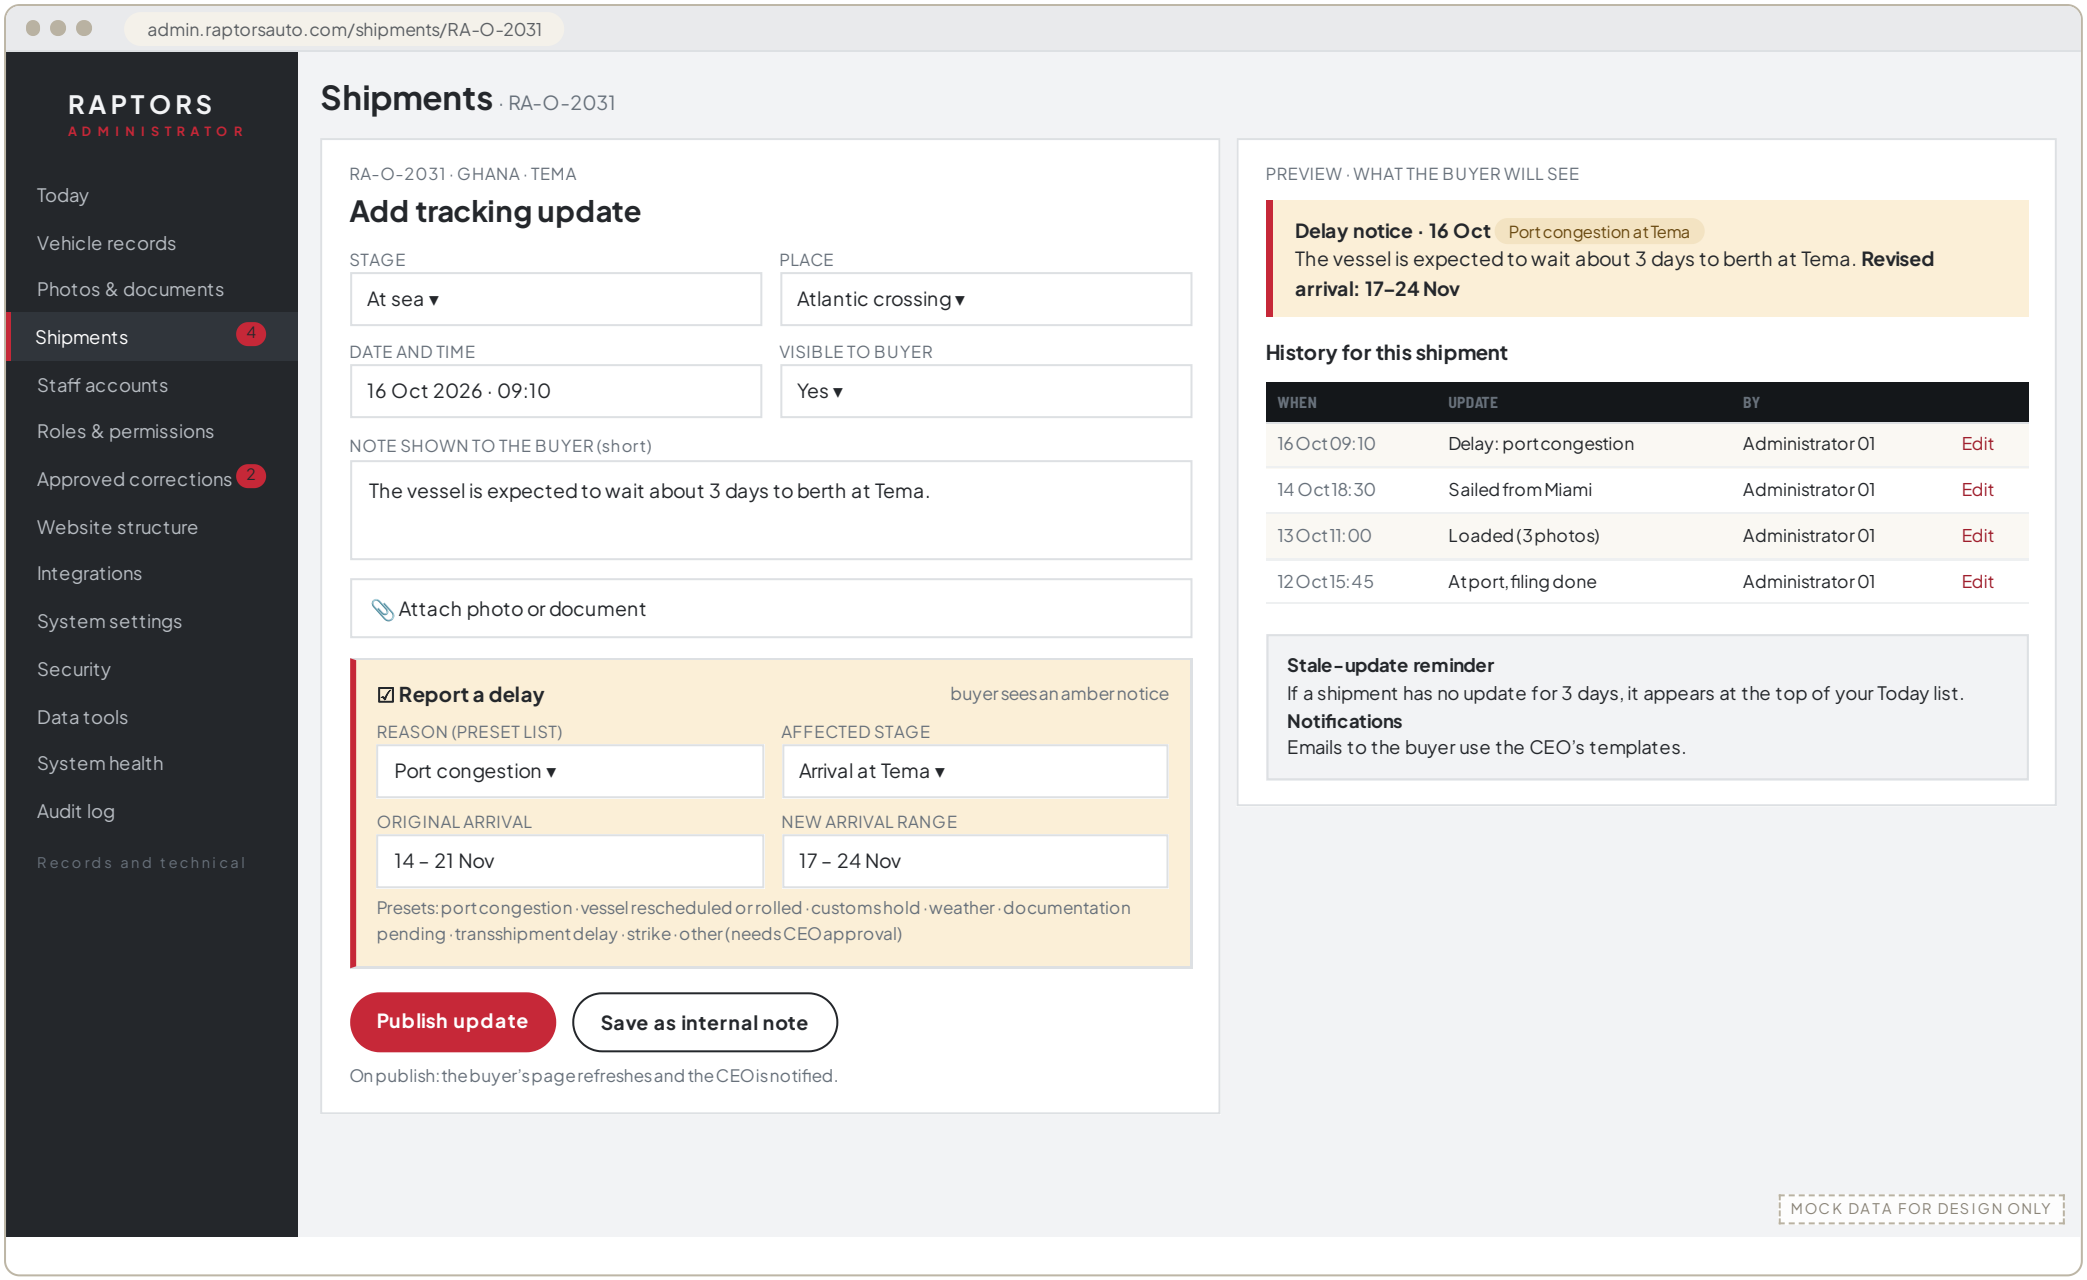

2 **Enter once.** Fields entered here feed the public site, quotes and the CEO's charts.

3 **Media manager.** Drag to reorder photos, tag flaws, upload a 360° sequence once.

4 **Submit, don't publish.** The Administrator prepares and previews; only the CEO's approval puts a listing live.

FIGURE 20 **Administrator portal: tracking update with delay notice and live preview**

CONCEPT MOCKUP · MOCK DATA

1 **Quick update.** Stage, place, time, a short note and a photo or document.

2 **Delay feature.** Pick a reason and a new arrival range; the buyer's page shows an amber notice.

3 **Preview.** See exactly what the buyer will see before publishing.

4 **Reminder.** A shipment with no update for a few days is flagged, so the tracker never goes quiet.

# 15 The Administrator portal

Screens: **Figure 19** (vehicle records), **Figure 20** (tracking update). The Administrator is the working hub for **records, shipments, accounts and the technical side**. The Administrator prepares and maintains; the CEO approves. The Administrator does not handle customers, payments, margins or bidding, and takes no consequential business action without the CEO's approval.

| PAGE | PURPOSE | KEY INTERACTIONS |
|---|---|---|
| **Today** | The Administrator's own queue | Draft vehicles waiting for media, shipments to update, approved corrections to apply, accounts the CEO has authorised |
| **Vehicle records** | Keep inventory records accurate | Add and edit drafts, specifications, location, status upkeep; consequential changes are **submitted to the CEO** |
| **Photos, video and documents** | Prepare listings | Drag-and-drop upload, reorder, flaw labels, 360° sequence, history and inspection documents; public or internal; prepared for CEO approval |
| **Shipment records and tracking** | Maintain the operational record | Board by stage; update stage, dates, forwarder, booking, bill of lading, vessel and documents; the buyer's tracker refreshes itself; delay reporting with preview; the Administrator cannot write to the customer |
| **Staff accounts** | Create and secure accounts | Create an account **only when the CEO has authorised it**, assign the role the CEO decided, deactivate, force sign-out, reset two-step verification |
| **Roles and permissions** | Implement authorised access | Permission matrix; every change logged; roles with finance or approval powers need CEO approval |
| **Approved corrections** | Fix records safely | Queue of corrections the CEO has approved, each applied with a reason and an audit-trail entry |
| **Website structure and SEO** | How the site is organised | Menu, page structure, redirects, titles; homepage and featured selections are proposed here and approved by the CEO |
| **Media library and storage** | Keep files healthy | Storage use, failed uploads, re-processing |
| **Integrations and settings** | Technical connections | Email, storage, video, analytics, email sender and delivery, maintenance mode; document templates' technical set-up |
| **Security, data tools, backups, monitoring, audit log, system health** | Keep the platform safe | Sign-in history and alerts; exports and reference lists; backup status and restore requests; errors and uptime; the full audit log |

**Prepare, then approve:** the Administrator prepares a vehicle record or change and submits it; only the CEO's approval publishes it.

# 16 The CEO portal

Screens: **Figure 16** (requests board), **Figure 17** (payments), **Figure 18** (dashboard). The CEO portal is where the business is **run and decided**. The CEO has full access to customer information, financial records and margins, exclusive authority over sourcing, bidding and deposits, and exclusive responsibility for customer communication, and may delegate routine work to staff accounts the CEO authorises.

| PAGE | PURPOSE |
|---|---|
| **Dashboard** (nine pages) | Overview, Sales, Margin, Inventory, Pipeline, Cash, Exports, Markets, Exceptions; every chart drills into records |
| **Approvals** | The control points below |
| **Enquiries and quotations** | Inbox with owner, status and follow-up; quotation builder with **preview, then explicit send** |
| **Vehicle requests** | The board and the find-and-quote builder (Section 10.5) |
| **Customers** | Contacts, identity verification, linked records |
| **Orders and payments** | One record per sale; invoices; **recording deposits and balances** with the bank-confirmation tick; receipts |
| **Finance** | Cash received, balances outstanding, receivables ageing, margin by vehicle; "Incomplete data" where costs are missing, never a guess |
| **Vehicles and shipments** | Full access; approve publication; see every stage and exception |
| **Destinations, rates, fees and pricing** | The CEO decides which countries are open and sets the rules |
| **Website content, staff and roles, reports, policies** | Final say on the public face; decides who may do what |

**The dashboard.** Each chart answers one question, drills into the records, offers "View as table", a date range and a previous-period comparison, and exports to PDF or CSV.

| # | CHART | QUESTION |
|---|---|---|
| 1 | Revenue by month | Are we selling more or less than before? |
| 2 | Gross profit and margin | Are we making money on each sale? |
| 3 | Sales funnel | Where do we lose buyers? |
| 4 | Revenue by destination | Which markets matter most? |
| 5 | Cash position | How much money is owed to us? |
| 6 | Inventory ageing | Which cars are not moving? |
| 7 | Stock mix | What do we hold? |
| 8 | Shipments by stage | Where is every export right now? |
| 9 | Own stock vs sourced vehicles | Which flow is growing? |
| 10 | Requests and response time | Are we answering requests fast enough? |
| 11 | Lead sources and reply time | Where do good leads come from? |
| 12 | Days to sell | Is stock selling faster? |

Every figure comes from recorded transactions; mock data is used only in design, labelled.

**Approvals.** Vehicle publication or change; business-record corrections; staff accounts and roles; refunds and returns; quotation discounts by authorised staff above the limit; opening or closing a destination; write-offs and status overrides. Every decision is logged.

# 17 Roles and permissions

| AREA | ADMINISTRATOR | CEO |
|---|---|---|
| Vehicle inventory records | Manage and update | Full access and oversight |
| Vehicle photos and listing records | Maintain and prepare changes | Approves consequential publication and changes |
| Customer information | No routine access | Full access |
| Financial records and margins | No routine access | Full access |
| Sourcing, bidding and deposits | No authority to execute | Exclusive authority |
| Internal shipment records | Maintain operational records | Full access and approval authority |
| Shipment tracking updates | Update stages, dates, places, photos and documents | Approves customer-notification templates; sees every stage |
| Customer communication | No independent customer-facing communication | Exclusive responsibility |
| Payment settings and bank details on documents | Technical set-up and troubleshooting | Controls financial arrangements |
| Staff accounts and technical permissions | Creates accounts and implements authorised access | Decides business access and roles |
| Business-record corrections | Implement approved changes with an audit trail | Approves corrections |
| Backups, security and system health | Manage | Business oversight |
| Website structure and media library | Manage | Approves homepage and featured selections |
| Consequential business actions | Execute only with required CEO approval | Final approval authority |

**Optional staff roles (only if the CEO authorises): Sales** (enquiries, quotations and customer communication within CEO limits) and **Finance** (record payments received and view orders; cannot approve refunds, write-offs or bids). The Administrator never takes on their work. Permissions are enforced by the database, not only hidden in menus.

# 18 Data design

**Core records:** Vehicle (media, documents, cost entries) · Customer · Enquiry · Quotation · Vehicle request (details, contact preference, status history, private source note, internal costs, quotation) · Order · Payment (deposit, part payment, balance; amount, date, reference, bank-confirmation) · Invoice and Receipt documents · Shipment (checklist, documents, forwarder) · Tracking update · Delay notice · Buyer access (hashed ID, attempts) · Document vault · Destination (rate entries) · Approval request · Staff user (role) · Audit log · Website content · Notification log · Email templates.

**Flow of information:** the Administrator prepares a vehicle; the CEO approves it and it appears on the site; a visitor's form creates an enquiry or request in the CEO portal; the CEO quotes, the customer accepts, the CEO records it and issues the invoice; the CEO records each confirmed payment and receipts follow; the Administrator updates the shipment and the buyer's tracker reads the same record; the dashboard reads the same records, so a chart can never disagree with the data.

**Rules the data enforces:** money in whole cents with its currency; a vehicle cannot be Sold without a paid-in-full order or hold two active reservations; payments, issued documents and the audit log are never edited or deleted; private files only through short-lived links.

# 19 Technology, security and performance

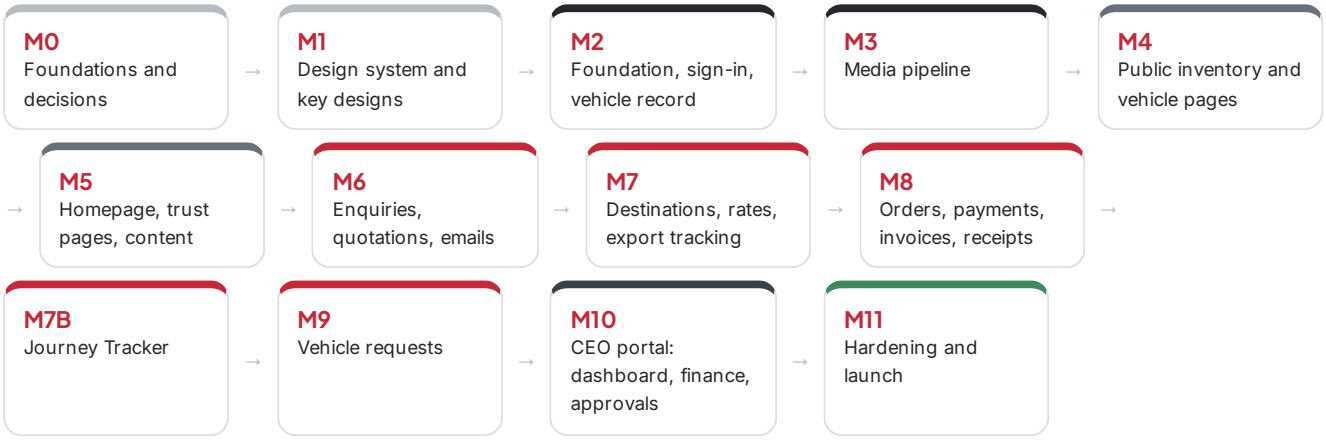

| NEED | RECOMMENDATION | WHY |
|---|---|---|
| Website and portals | One Next.js (TypeScript) application: public, `/admin`, `/ceo`, with the tracker on its own address | One codebase and design system; fast, search-friendly pages |
| Database | Managed PostgreSQL with row-level security | Money, relationships and reporting |
| Sign-in | Managed authentication with two-step verification and database roles | Avoids building security |
| Search and filters | Indexed database queries | Enough at launch |
| Photos, 360°, video | Object storage with automatic resizing; image-sequence viewer; a video streaming service | Fast on phones; no lock-in |
| Email and documents | Transactional email; PDF generation for quotations, invoices and receipts | Branded, reliable |
| Payments | **Manual recording and confirmation of bank transfers.** No card gateway at launch | Cost; Raptors confirms in its own bank |
| Charts | Charting drawn from live queries | Always match the records |
| Hosting, monitoring, analytics | Managed hosting with automatic deployments; error tracking and uptime alerts; privacy-friendly analytics | Small team, little operations |

**Security:** two-step verification on every account; roles enforced in the database; separate paths for Administrator and CEO; no card data collected; private files by short-lived links; identity documents and title images never public; rate limits and bot protection on public forms; Buyer IDs hashed; daily backups with a tested restore; immutable audit log; no auction passwords stored.

**Targets:** vehicle pages meaningful in under 2.5 seconds on a mid-range phone; filters respond in under half a second; WCAG 2.2 AA; 99.9% uptime on the managed platform.

# 20 Development milestones

We work **one milestone at a time**; each ends with a report, then a stop until the client approves.

Approval gate after every milestone. M7B follows M8 because the Buyer ID is created when payment is complete.

| MILESTONE | DELIVERABLES | ACCEPTED WHEN |
|---|---|---|
| **0. Foundations and decisions** | Decisions register; the bank's answers on incoming international wires; licence details; brand assets and final logo; platforms to name; fee schedule; invoice and receipt details with the accountant | Every decision is decided or deferred with an owner (no building) |
| **1. Design system and key designs** | Tokens, components, and the full prototype from the approved UI direction, including emails and documents, with labelled mock data | The client approves the look on real photography |
| **2. Foundation, sign-in, vehicle record** | App skeleton; two-step sign-in; roles in the database; audit log; staff accounts on CEO authorisation; Administrator's vehicle records with submit and CEO approval | Create, submit, approve and withdraw a vehicle; unauthorised users blocked for every role |
| **3. Media pipeline** | Photo upload and resizing, flaw labels, documents (public or internal), 360° sequence, video; media health tools | 40 photos render on phone and desktop; private documents unreachable |
| **4. Public inventory and vehicle pages** | Inventory with pill filters, favourites; vehicle page with gallery, estimator states, missing-data rules; real data | Filters match the database; shared links work; speed target met |
| **5. Homepage, trust pages, content** | Homepage (all sections), About, Guides, FAQs, Contact, Legal; content proposed by the Administrator and approved by the CEO | Featured selections appear only after approval; trust figures are real |
| **6. Enquiries, quotations, emails** | Forms; CEO inbox; quotation builder with **preview then explicit send**; branded quotation PDF; email template system with starter templates | An enquiry reaches the CEO, becomes a sent quotation, and saving never sends |
| **7. Destinations, rates, export tracking** | Destination records and rates; estimator; shipment records and checklist; 72-hour deadline; stale-update reminder | "We will confirm" when no rate; correct deadline; the Administrator cannot message customers |
| **8. Orders, payments, invoices, receipts** | Order record; invoice on recorded acceptance; **recording of deposit, part payment and balance** with the bank-confirmation tick; branded invoice and per-payment receipts; gating of next steps with logged overrides; reservation and sold logic; approvals for refunds and overrides | Nothing is marked received without the tick; deposit shows correct paid and balance; receipts only for confirmed payments; documents immutable |
| **7B. Journey Tracker** | Buyer ID creation, sign-in with VIN and Buyer ID, tracker (desktop and phone), Administrator's update screen with delay reporting and preview, shipment emails | A buyer sees only their vehicle; updates and delays appear within moments; wrong attempts pause the page |

| MILESTONE | DELIVERABLES | ACCEPTED WHEN |
|---|---|---|
| **9. Vehicle requests** | Four-step request; request page; CEO board with find-and-quote builder; **price-privacy rules with tests**; the platforms band and Recently sourced section; found-vehicle inventory flag; templates for the flow; Raptors' procedure configured | A request goes from submission to purchase with correct records; the customer never sees source or purchase price |
| **10. CEO portal: dashboard, finance, approvals** | Nine dashboard pages, twelve charts with drill-down; finance views; approvals queue; reports; policies | Every figure reconciles to records; the Administrator has no customer or financial access |
| **11. Hardening and launch** | Security review; restore test; accessibility and performance passes; real-device testing; monitoring; launch checklist; training notes | Launch checklist signed off |

**Testing throughout:** automated tests for money, status, permission and price-privacy rules; manual testing on real phones; never testing with real customers' data.

# 21 First release versus later

| IN RELEASE 1 | LATER |
|---|---|
| Public site, inventory, vehicle pages, 360° where available | Vehicle comparison |
| Request a Vehicle with request page and CEO board | Automatic auction listing feeds |
| Enquiries, quotation (preview then send), invoice, receipts | Customer accounts and login |
| International bank transfer with deposits and balances | Online card payments |
| Destination records, export tracking, Journey Tracker | Real vessel positions; WhatsApp automation |
| Administrator and CEO portals with dashboard charts | Multi-language site; mobile app |
| Concierge quick actions, favourites, guides | AI assistant |

# 22 Decisions and risks

## 22.1 Decisions (one at a time)

| # | DECISION | WHO | NEEDED BY |
|---|---|---|---|
| 1 | The 3–5 countries and ports to launch with | Raptors | M7 |
| 2 | Legal entity, state, dealer licence details to publish | Raptors | M0, M5 |
| 3 | Bank for USD wires; incoming wire fees and limits | Raptors | M0, M8 |
| 4 | Freight forwarder(s) and shipping lines | Raptors | M7 |
| 5 | Fee schedule for own stock and vehicle requests | Raptors | M6 |
| 6 | Raptors' own sourcing procedure (deposits, deadlines, what a quotation includes) | Raptors (CEO) | M9 |
| 7 | Deposit policy: usual amount or percentage, and which steps wait for the deposit or full payment | Raptors (CEO) | M8 |

| # | DECISION | WHO | NEEDED BY |
|---|---|---|---|
| 8 | The final logo file; photography and video capacity; domain; brand assets | Raptors | M0, M1 |
| 9 | WhatsApp click-to-chat only, or automation later; languages | Raptors | M0 |
| 10 | The full list of platforms to name, and whether official logos may be shown | Raptors | M5, M9 |
| 11 | What the customer sees when a vehicle is found (photos and specifications, never source or price); whether platform photos may be used | Raptors (CEO) | M9 |
| 12 | Pricing model for vehicle requests (fee in quotation, search deposit, or both) | Raptors (CEO) | M9 |
| 13 | Invoice and receipt details with the accountant: numbering, tax lines, bank details, terms | Raptors (CEO) | M6, M8 |
| 14 | Wording of every customer email and document | Raptors (CEO) | M6 |
| 15 | Approval limits (discounts, price changes, refunds, write-offs) and which staff, if any, the CEO authorises | Raptors (CEO) | M2, M6, M8 |
| 16 | Buyer ID timing (at full payment or at deposit); optional phone code at first sign-in | Raptors | M7B |
| 17 | Whether Recently sold and customer-delivery entries need permission, and what they show | Raptors (CEO) | M5 |

## 22.2 Risk register

| RISK | EFFECT | MITIGATION |
|---|---|---|
| A customer claims or screenshots a payment that has not cleared | Loss | Nothing is marked received until the CEO confirms in Raptors' own bank |
| Destination rules change | Wrong expectations | Staff-maintained, dated records; "as last confirmed" wording |
| Fraud (fake buyers, overpayment, impersonation) | Loss | Section 11.7 rules; no release before payment is complete |
| Leak of source or purchase price in the request flow | Loss of margin and trust | Price-privacy rules enforced in code and tested |
| Customer defaults after Raptors buys | Loss | Raptors' own deposit terms |
| Poor photography | Weak brand | Photography guide; reject low-quality uploads |
| Missed 72-hour export deadline | Delay, storage fees | Deadline calculated and flagged |
| Tracker goes quiet | Buyer calls the company | Stale-update reminder; clear "updated" times |
| Over-promising timelines | Complaints | Ranges and "estimate" wording |
| Scope creep | Late, costly build | Milestone gates and written scope |
